Backbone Events Project

Continue from the Backbone Views projects.

Create a new view called **NewVehicleView**. This view should be rendered above the list of vehicles and include a text box to add a new vehicle to the list. Next to the text box should be a button called **Add**. When the user clicks the button,

- A new vehicle with the given registration number should be added to the top of of the list.

- The text box should be cleared.

Hint: Use the event aggregator pattern to communicate between the NewVehicleView and the view responsible for the list of vehicles. These two vehicles don't know anything about each other. They are only coupled to the event aggregator. NewVehicleView publishes an event about the new vehicle added, to which the other view subscribes to.
